

Domain Task 01

Name: Ryan Lobo

Submission Date 17/04/2026

1) Setup Testing Environment

A) Install Kali Linux

We will be using kali Linux for all the testing we will be doing, but there are 4 ways to use kali Linux

i)Virtual box:

Installing Kali OS in an application that runs the OS

To run Kali OS on virtual Box, we install Kali Linux ISO file and then put it in the virtual box and allow certain requirements and let it run

We will Install this version

ii)Dual Boot:

Having Kali Linux on your laptop but at the same time has another OS

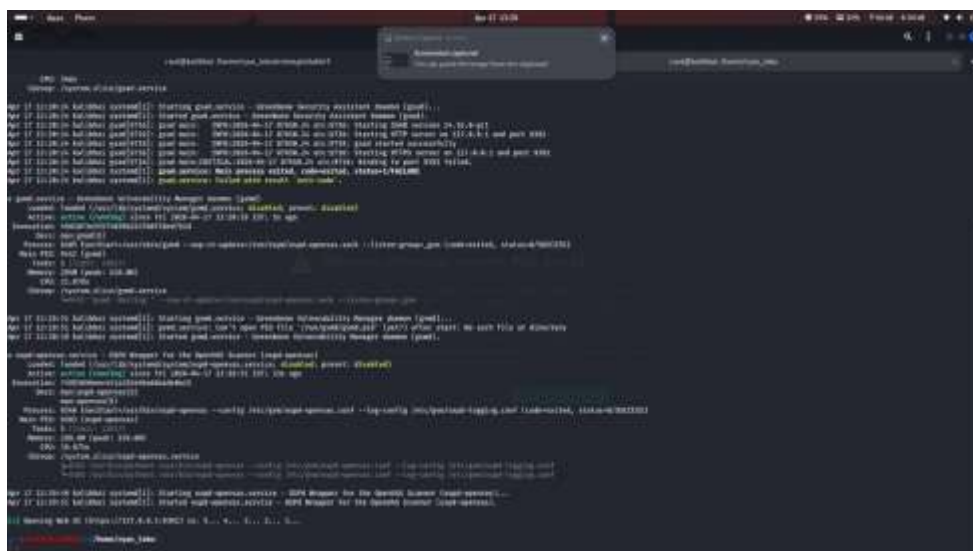

iii)Kali Live:

Runs using a pen drive and booting the pen drive, good for one time uses only

I have Kali Linux Installer on my desktop and will be performing all the task on the desktop

Metasploitable3 is a VM that is built from the ground up with a large number of Vulnerabilities, It I intended to be used as a target for testing exploits with Metasploit. We will install Metasploitable 3 from GitHub,

After this we open the Web GUI for which the results are in Document Findings

ii) Nikto (Web Server Scanner)

To install we run “sudo install nikto”

```
(root@kalibhai)-[/home/ryan_lobo]
# sudo apt install nikto -y
nikto is already the newest version (1:2.6.0-0kali3).
The following package was automatically installed and is no longer required:
  libteamctl0
Use 'sudo apt autoremove' to remove it.
```

Summary:

Upgrading: 0, Installing: 0, Removing: 0, Not Upgrading: 2029

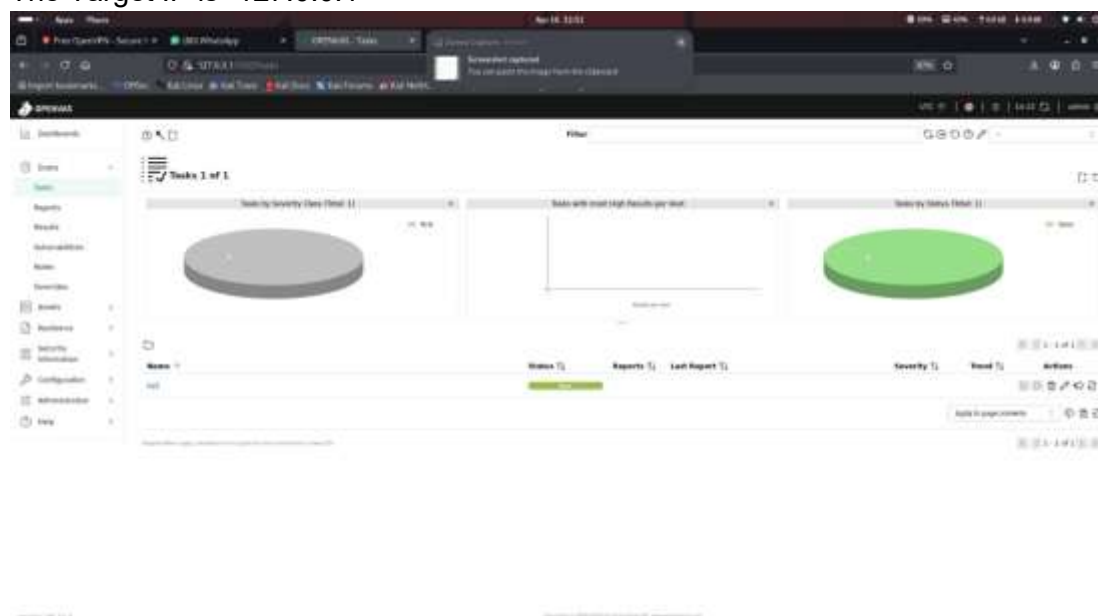

After that we run nikto with the target ip or the web we want to scan
Results of nikto in Document Findings

3) Document Findings

i) OpenVAS Scan:

These are the results of the Metasploitable3 and OpenVAS scan

The Target IP is “127.0.0.1”
